## Webinar Series: Costing Child Wasting Treatment

The Use of Cost Data for Decision Making in Child Wasting Treatment

June 16, 2022

3-4.30PM CET

### **Webinar Working Group**

### **Supporting Donors**

**Note**: This webinar is made possible by the generous support of all of our donors, however, the contents are the responsibility of the GNC Technical Alliance and the individual presenters and do not necessarily reflect the views of these donors.

## Child wasting costing and costeffectiveness working group

- Review of available evidence on costefficiency and cost-effectiveness of the management of wasting in children found little available evidence
- Formed in 2021 as a sub-working group to Wasting GTWG:
  - Raise awareness on the importance and use of cost data for decision making relating to the treatment of wasting
  - And to increase availability and quality of costing data on wasting
  - Share information related to cost and costeffectiveness of wasting treatment

## **Objectives:**

- Raise awareness on the importance and use of cost data for decision making relating to the treatment of wasting
- Disseminate the key resources
- Inform on the existence of working group on the costing wasting treatment

## Webinar Agenda

- Introduction
- Presentation 1: Specific introduction to cost analysis
- Presentation 2: CSO use of cost data
- Presentation 3: Government use of cost data
- Presentation 4: Donor use of cost data
- Q&A
- Poll
- Video and Presentation 5: GNC Technical Alliance
- Closing

**Emily Keane** Senior Nutrition Advisor Save the Children

**Chloe Puett** Independent consultant, Researcher Stony Brook University - Public Health

**Bernardette Cichon**Senior Research Advisor
Action Against Hunger UK

**Caitlin Tulloch**Director for Best Use of Resources
International Rescue Committee

**Stacie Gobin** Senior Economist Save the Children

**Blandina Rosalina Bait** Nutrition Specialist UNICEF Indonesia

**Eric Anderson**Nutrition Advisor
USAID/BHA

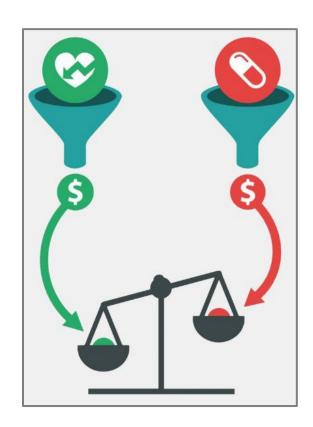

# Introduction to cost analysis and its use in decision-making

Chloe Puett, PhD
Independent Consultant
Stony Brook University, Public Health Program

## Why is cost data important?

- Limited humanitarian resources
- Practical complement to data on coverage, effectiveness
- Contextual decision-making
  - Feasibility of alternative options
  - Finance scale-up

# Types of economic evaluation

Method of Analysis	Cost	Effect
Cost-Efficiency	\$	Output achieved: cost per child treated/enrolled Example: compare resource use across programs
Cost-Effectiveness	\$	Disease-related outcome: cost per child recovered Example: compare with other wasting programs
Cost-Utility	\$	General measure of death & disability: DALY, QALY Example: compare w/ broader programs (other diseases)
Benefit-Cost	\$	\$ Example: compare program benefits (\$) with costs

Other analyses focus only on costs, the best method depends on specific objectives

## Why do we need more cost data?

- New approaches emerging
- Limitations in existing evidence<sup>1</sup>
- Costs vary greatly by (e.g.)
  - Country
  - Implementer (CSO, Gov't)
  - Included costs (institutions vs household, data sources used)

<sup>1</sup>Action Against Hunger & Save the Children. (2020). *The cost-efficiency and cost-effectiveness of the management of wasting in children: A review of the evidence, approaches and lessons*. London: Save the Children.

## Why do we need more cost data?

Vicious cycle of poor quality cost data

Minimum standards: **transparent reporting** to understand generalizability of cost estimates

## How (by whom) is cost data used?

- Unit costs per output/outcome
  - Enables benchmarking (max/target price per output)
  - Ultimately aid in deciding what to implement where
- Not always so straightforward...
- Survey of 6 major AAH donors¹ found:
  - All donors requested "cost-effectiveness analysis" of field programs
  - Definitions, criteria varied by agency
  - Donors felt they needed capacity building on economic assessments

## How (by whom) is cost data used?

### Government

Determine feasibility for their context

## **CSO**

Compare costs, improve efficiency

### Donor

Understand resource use of different programs

## How (by whom) is cost data used?

- In today's webinar:
  - <u>CSO example</u>: Caitlin Tulloch (IRC) uses cost-efficiency data for internal decision-making and benchmarking
  - <u>Government example</u>: Blandina Rosalina Bait (UNICEF Indonesia) used cost estimates of wasting treatment for gov't integration & scale-up
  - <u>Donor example</u>: Eric Anderson (USAID/BHA) considers practical challenges, limitations of cost data

## **Enjoy the presentations!**

## CSO use of cost data

How cost efficiency data is used within IRC for internal decision making and benchmarking

Caitlin Tulloch
Director for Best Use of Resources
International Rescue Committee

### **IRC Investment in Cost Evidence**

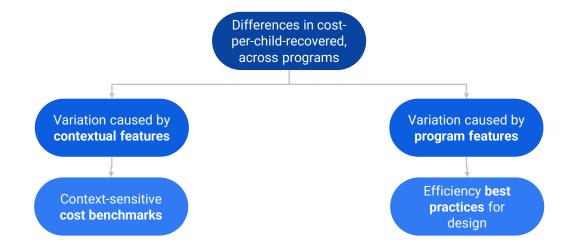

- Since 2015, IRC has invested in creation of cost evidence to drive internal learning and help us respond to donor questions
- Cost analyses are produced in collaboration with program teams
  - o Critical to ensure we understand programs we study, and what drove their efficiency
  - Also critical when interpreting differences and identifying "best practices"

		Programmatic Information				Rea	Reach		Cost	
;	ŧ	Project	T1		Country	CHW Delivery # treated	<u>~</u> 2	2021 Total Cost	2021	Cost/Output

	11	SAM Treatment	TFI26		Nigeria		1.242	325,494	\$	262

## **Objective is to Learn from Variation**

- We use a consistent costing methodology, to ensure that variation in results isn't driven by different math
- But then we expect to see variation in cost-efficiency across our programs: understanding variation is the whole point!

Now imagine if we could do this study of variation using cost-efficiency studies from many implementers!

#### **Our Data**

\* Note that these data do not include costs of RUTF at present

Data from 8 countries, up to 7 observations per country Cost-per-child ranges from less than \$100 to almost \$1,000

### **Context features that <u>constrain</u> cost-efficiency**

#### Cost-per-Child vs. Program Scale

## Programmatic features that <u>drive</u> cost-efficiency

Once I have decided to implement wasting treatment in a given context, what program design choices can I make with an eye towards greater impact per dollar?

# of Health Centers

Changeable, to a point

Cost per Health Center

Set by context

Cost per Child Treated Total Cost # of Outputs # of Health Centers x Cost per Health Center

Population x Malnutrition Rate x Coverage Rate

**Population** 

Set by context

Malnutrition Prevalence

Set by context

Treatment Coverage

Actually changeable!

## Government use of cost data

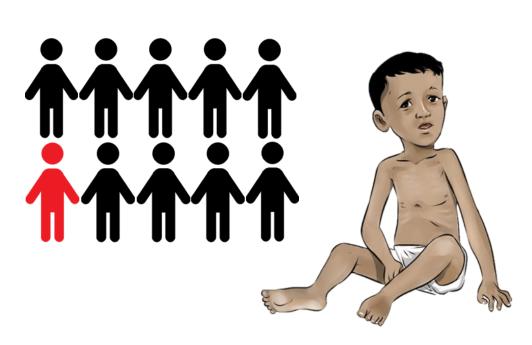

an example from UNICEF's work in Indonesia on costing analysis

Blandina Rosalina Bait Nutrition Specialist - UNICEF Indonesia

## **Severe Child Wasting in Indonesia**

- Indonesia has the second-highest children under five affected by severe wasting
- 1 in 10 children under five in Indonesia suffer from wasting
- > 2 million are severely wasted
- <5% of severely wasted children received treatment in a year

## Target on Child Wasting: Global and Indonesia

Reduce child wasting to <5% by 2025 (WHA) and < 3% by 2030 (SDGs)

By 2024 the Government of Indonesia aims to:

- Reduce child wasting from 10.2% to <7%</li>
- 90% of severely wasted children receive treatment
- 60% of primary health care centres provide IMAM services

# Cost analysis of IMAM services in Indonesia: A case study from NTT Province

- First ever cost analysis of IMAM in Indonesia
- Supported by an International Consultant (Lani Trenouth), UNICEF EAPRO and UNICEF Indonesia in partnership with the Government of Indonesia

## Involvement from Government of Indonesia (Gol)

Strong buy-in from the GoI (the Ministry of Health and Ministry of Development and Planning):

- 1) Preparation of the study (e.g. selection of focus areas, costing drivers, secondary data, etc.)
- 2) Tools development and contextualization to Indonesia context
- 3) Actively providing inputs from preliminary results up to final report, including the IMAM programme implementation and policy implication.

## Relevance of IMAM costing to the Gol scale-up effort

- Contextually grounded cost estimate, relying less on proxies and assumptions from other contexts or programs; makes cost assumptions transparent and increases the reliability of results.
- Costing tool facilitates budget impact analysis (e.g. increasing coverage).
- 3) Provides cost data relevant for decisions on resource allocation needed to operationalize scale-up plans

## **Core Wasting Treatment Program Components**

### **IMAM model**

- Inpatient care for all <6 mo and complicated cases 6-59 mo
- Outpatient care for uncomplicated cases 6-59 mo
- Community outreach

### **Inpatient-only model**

- Inpatient care for cases 0-59 mo, complicated and uncomplicated
- No outpatient care
- Community outreach

## **Costing Objectives**

- 1) Estimate the total financial envelope required to implement IMAM in the sampled districts at the scope and scale outlined in the National Nutrition Plan
- Compare the cost of service delivery through IMAM model with the cost of an inpatient-only care model for all cases including those without complications
- 3) Identify cost drivers for the purpose of seeking opportunities to improve cost-efficiency

## **Results of IMAM Costing**

- 1) IMAM is 22% more cost-efficient than the inpatient-only model.
- 2) Focus on increasing treatment coverage in high burden areas; consider trade-off with equity.
- 3) Top three cost drivers of IMAM: 1) Community outreach personnel (28%); 2) RUTF & supply logistics (19%); 3) Outpatient care staff training (8%).
- 4) Early detection may reduce cost.

Thank you Terima kasih

## Donor use of cost data

## Practical considerations / limitations

Eric S. Anderson, Nutrition Advisor Bureau for Humanitarian Assistance (BHA)

# The Value of Costing Data and Analysis for USAID/BHA

- Scale of BHA CMAM Funding
- Increased cost effectiveness = more children reached

# Cost Effectiveness Work Stream of FAQR

- Four Foods Study
- FACET4SNF Decision Support Tool (<u>facet4snf.org</u>)
- <u>FACET4SNF</u><u>Training</u>

#### Calculated Results based on User Inputs

Total Quantity and Total Cost Indicators:

170.2 MT: Total Loss-Adjusted Quantity of Selected Specialized Nutritious Food

\$544,616 USD: Total Procurement Cost of Selected Specialized Nutritious Food

\$0 USD: Total Economic Cost to Volunteers and Recipients/Caregivers

\$5,408,262 USD: Total Financial Cost to Program

\$5,408,262 USD: Total All Inclusive Cost

Cost-efficiency Indicators:

\$203 USD: Financial Cost per Targeted Child

\$203 USD: All-Inclusive Cost per Targeted Child

Cost-effectiveness Indicators:

\$271 (\$239, \$312) USD: Financial Cost per Recovered Child

\$271 (\$239, \$312) USD: All-Inclusive Cost per Recovered Child

 $$429 \ ($318, $578) \ USD: Financial Cost per Sustained-Recovered Child$ 

\$429 (\$318, \$578) USD: All-Inclusive Cost per Sustained-Recovered Child

Indicators related to MAM Burden:

65%: Total MAM Burden Will Be Targeted by the Program

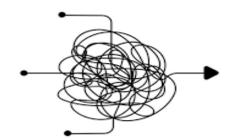

49% (42%, 55%): Percentage of Total MAM Burden with Recovery Due to This Program

 ${\bf 31\%} \ (23\%,41\%): Percentage of Total MAM Burden with {\it Sustained Recovery} \ within \ User-defined \ Post-treatment Period Due to This Program$ 

## Practical Challenges

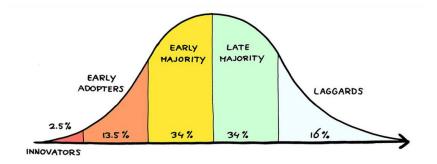

- Incomplete costing data
- (In)flexibility of choice
- Imprecise attribution of shared costing elements
- End to end programming costs straddling multiple organizations

# How do we envision using costing data going forward at USAID/BHA?

- Niche expertise to common practice
- İmproved fluency in costing
- Supporting the community to develop and use costing tools and analyses

## Q&A

## Poll

## What we do: The GNC Technical Alliance explained

2 minutes 30 seconds

## How we provide support

#### **Technical Support Team**

#### Helpdesk Support

- ✓ NiE programming
- ✓ Intersectoral Collaboration
- ✓ Cluster Coordination
- ✓ IM/Nutrition Information for Coordination
- ✓ Advocacy

#### Deployable Advisors

#### <u>In-country support</u>

Technical Advisors deployed to provide technical support

#### Remote support

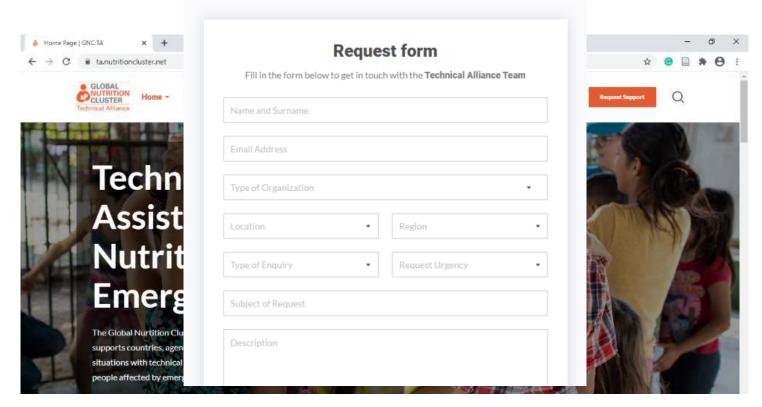

Technical Advisors
work with teams
remotely to
